

**VCcount**  
by VisiConsult

- ✓ Counting of ESD bags with desiccant
- ✓ Automatic barcode recognition
- ✓ Recognition of odd shapes
- ✓ Splicing Detection
- ✓ 8,5 sec. cycle time
- ✓ PCB inspection
- ✓ Statistic suite

**XRHCount**

The contactless SMD Component Counter

**NEW**

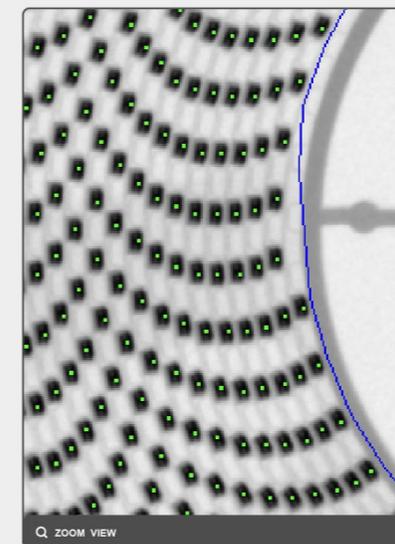

Touchscreen

**NEW**

Intuitive  
User Interface

**NEW**

High quality  
drawer concept

## Ready to use

As soon as the XRHCount arrives at a facility it is ready to use. The Plug and Play model is based on the basic premise that system teaching is not required because it already has a globally proven database stored locally. This results in no lost time to get the counting started.

## Intuitive Software

The newest software version has a very intuitive user interface that was developed in correspondence to the customer's request of a touch screen.

## Unbeatable cycle times

The cycle time is optimized via improved hardware and software. The new generation of the system is up to 20% faster and counts within 8.5 seconds per reel, and the Quad Count just needs 2 seconds per reel. The table on the back shows the timings of the counting process: Drawer loading + component analysis + unloading.

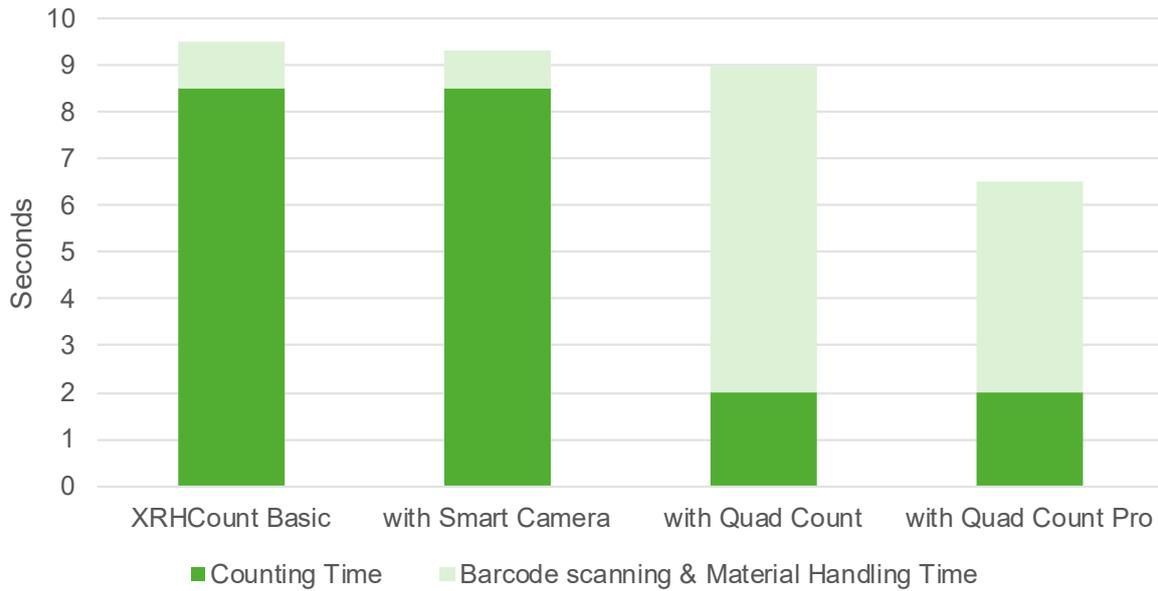

## Smart Counting

For smart industries the system is ready for robots, and the free Connectivity Suite ensures an easy integration into the customer's existing systems - now real-time data can be integrated to the facility's ERP system or even be exported into a file based on usual industrial formats like XML or CSV.

## No maintenance

Mechanically, the design of the drawer was optimized by a new concept using linear guides and lower weight, and maintenance time is reduced by implementing more access points for the service technician.

## Different process times of **XRHCount** options
