

PS756

Position Sensor System 100 mil, Twist Proof

Centers (mm/mil)	2,54 / 100
Current	5,0 A *
R typ	20 mOhm *
Temperature	-45°C...+100°C

Spring Force Probe+Sensor (cN ±20%)

Version	Preload	Nominal
Sensor	40	60
Standard	60	150
Standard	100	300

Travel (mm)

Version	Nominal	Maximum
Standard	4,0	4,4
Thread (M)		1,6
Wrench Size		1,7
Pointing Accuracy		±0,08 mm

Materials and Plating

Plunger	BeCu, gold plated
Barrel	Brass, gold plated
Spring	Music wire, silver plated
Receptacles	Brass, unplated

Accessories

Insertion tool receptacle	FAWZ756
Screw-in tool probe	FWZ732 (T) FWZ732S1 (T)
Screw-in tool sensor	FWZPS100
Extension cable for Molex-connector (250 mm)	2112221

Drill Size (mm)

H756PS without knurl	1,99 - 2,00
H756PSRD with knurl	2,02 - 2,04

Projection Height (mm)

H756PS with F756	10,5
------------------	------

2112221:

Extension cable 250 mm for Molex-connector

The position sensor system consists of a twist proof threaded probe F756..., a receptacle H756PS and a sensor element PS100.... These three elements are mounted into a fixture plate. The position sensor is screwed at the receptacle from backwards after the receptacle is mounted.

* The values for current and resistance are only valid for a soldered connection at the receptacle. The blue wire of the Molex connector only allows a maximum current of 1,0 A and R_{typ} 500 mOhm.

Order code	Tip Style	ϕA	B	C	H	L	Version	Screw-in Tool
F75684B0001G150	84	1,50	0,50	4,15	10,30	41,60	-	FWZ732; FWZ732T
F75684B0004G150	84	1,50	1,00	4,15	10,30	41,60	-	FWZ732; FWZ732T
F75684B0003G150	84	2,00	0,80	4,15	10,30	41,60	-	FWZ732; FWZ732T

Further variants see F756

PROBES FOR SPECIAL APPLICATIONS

Position Sensor System

Contact Probe with Integrated Potentiometer

The position sensor system has been developed to enable an exact measurement of the travel of the plunger additionally to contacting the test item.

The system has a modular design and consists of a contact probe, a receptacle and a sensor element with integrated potentiometer. The potentiometer is galvanically isolated from the probe.

After applying an operating voltage, the sensor supplies a measurement voltage that is linear to the travel of the plunger (potentiometric operation). Alternatively, with restrictions regarding accuracy and life cycle, also the resulting resistance can be used as measurement value (resistive operation). FEINMETALL recommends the potentiometric operation for all position sensor systems. The measurement results can be analyzed by the available tester environment, commonly.

Variants

The position sensor system is available for different centers of 75 mil, 100 mil and 157 mil. For 100 mil centers a twist proof version is available (PS756). The system for 157 mil is suitable for airtight modules or fixtures (i.e. leakage rate $< 0,5 \text{ cm}^3 / \text{min}$ at 0,7 bar).

Measuring ranges

PS175: 0...6,4 mm (75 mil)
 PS756: 0...4,4 mm (100 mil)
 PS732: 0...5,0 mm (100 mil)
 PS733: 0...5,0 mm (157 mil)

Modular Design of the Position Sensor System

Specification sensor element

Measuring principle: potentiometric
 Accuracy: $\leq 2\%$
 Reproducibility: typ. $\leq \pm 0,05 \text{ mm}$
 Therm. resist. coeff. $5 \times 10^{-5} / \text{K}$
 Nominal spring force: 60 cN
 Preload: 40 cN
 Nominal: 4,0 mm

Connections

Red: Operating voltage U_0
Black: Measuring signal U_m or R_m
White: Mass
Blue: Test point of contact probe tip (maximum current 1 A)

Calibration

Due to test principle with a certain initial and final resistance and due to electrical and mechanical tolerances the exact plunger position in millimeter requires a calibration of the position sensor system after assembly.

Measurement of relative values

By calculating the difference between two measurement values of one probe deviations related to a required position can be determined in positive or negative travel direction.

Reference measurement

By calculating the difference between two measurement values of different probes deviations related to a reference position can be determined.

The reference can either be a certain reference point of the test item or a special "golden device".

Zero balance

Depending on the hard- and software of the test system the measurement signal can be zeroed at user-defined positions. This method allows positive or negative deviations without calculating any differences.

FEINMETALL recommends periodic calibration and zeroing of the system.

- U_0 Operating voltage (maximum 10 VDC)
- U_m Measuring voltage (potentiometric op.) ($U_1 < U_m < U_p - U_3$)
- R_m Measuring resistance (resistive op.) ($R_1 < R_m < R_p - R_3$)
- R_1 Initial resistance
- U_1 Initial voltage ($U_1 = I * R_1$)
- R_3 Final resistance
- U_3 Final voltage ($U_3 = I * R_3$)
- R_p Potentiometric resistance ($4,5 \text{ kOhm} \pm 20\%$) ($R_p = R_1 + R + R_3$)
- R_s Slider resistance
- R_L Load resistor (optional to protect against over-current at the slider)
